DETAILED ACTION

Claim Rejections - 35 USC § 112

Claims 1-2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are indefinite because it is unclear how the water is activated merely by contacting the water with a hydrogen absorbing alloy, since the hydrogen absorbing alloy would remove the hydrogen and there is no step of adding hydrogen to the water to activate the water.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Reznik, U.S. Patent 5,951,839 in view of Japanese patent 09-001153 to Kawasaki.

The Reznik patent disclose the claimed method for improving the quality of a foodstuff comprising the steps of washing treatment with activated water, wherein the water is formed by the addition of hydrogen through a ceramic container (see figure 2 and column 4-6).

The reference does not disclose the use of palladium as the source of hydrogen. The Japanese patent is cited to show that it is known in the art to use palladium to provide hydrogen to water (see abstract).

Consequently, the invention as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the disclosure of the Reznik patent, because the Japanese patent teaches that such use of palladium containing material to provide hydrogen to water is routinely used in the art of activating water.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arun S. Phasge whose telephone number is (703) 308-2528. The examiner can normally be reached on MONDAY-THURSDAY, 7:30-6:00.
